**CYBER KORP'S INNOVATIVE AGILE DELIVERY MODEL HAS MUCH SUCCESS**  
*Agile Development Center™ delivers high quality, cost effective software development solutions*

**Chicago, Illinois, February 22, 2007** – Cyber Korp, a leading Agile software development and staffing solutions provider, announced today, yet another customer, a leading provider of mortgage insurance services since 1972, has chosen the Agile Development Center in Chicago, IL, for delivery of specific software development projects. Cyber Korp will be helping the company develop robust and scalable products that will support this client's mortgage insurance services.

Cyber Korp has innovated an alternative domestic outsourcing model that combines the most senior talent available in the industry with the best and brightest out of local Universities, and then locates them in proximity to client sites in 100% Agile facilities called Agile Development Centers (ADC). The result is an extraordinary blend of talent at an attractive blended rate. In addition, Cyber Korp's 100% Agile ADC's utilize the agile family of methodologies including Scrum, XP, Test Driven Development and Continuous Integration.

"I am very excited to be partnering with several of our clients in this new way and look forward to many long-term relationships", stated Jamburajan Chellasamy "Chella", President and CEO, Cyber Korp. "This particular project is an ideal one for our Agile Development Center (ADC) in Chicago due to the short production timelines requested by our customer and because of the need to have close customer involvement."

### **About Cyber Korp**

Cyber Korp, a leading Agile software development & staffing solutions provider, uses advanced technologies and innovative project delivery solutions to help its customers achieve true business value. Clients realize higher quality solutions in less time and at less overall cost using Cyber Korp's core offerings, *FlexCapacity™*, *Agile Project Delivery* and *AgileTransformation™* Services.
